

TECHNOLOGY LESSON PLAN

- *Fundamental 1B* ●

- *Objectives* ●

Describing Pictures
Talking about the weather

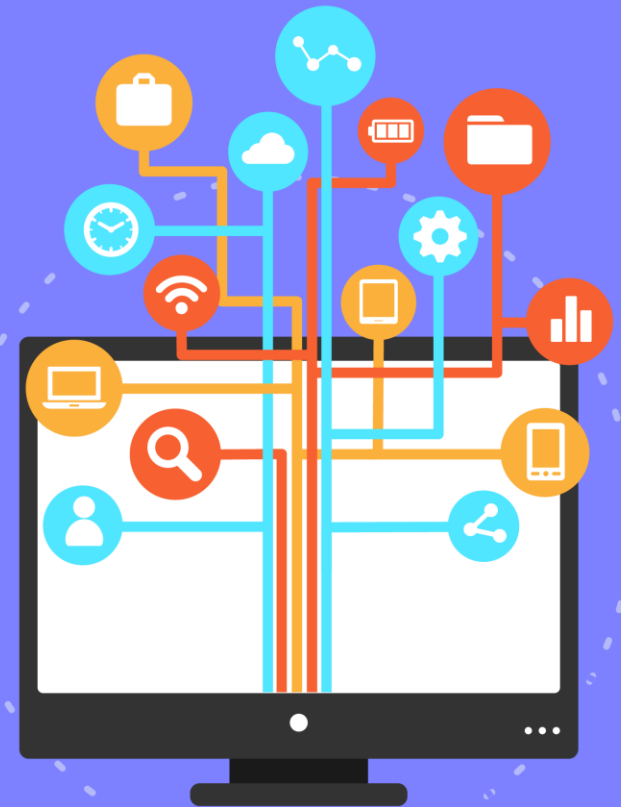

TECHNOLOGY LESSON PLAN

Warm Up:

As a warm up activity, students already have a list of verbs in past they can work with to talk about their weekend for a while. Ask them to work in groups of three or two for a minute or so, then switch them one time to get as much information as possible.

Activity 1

For this part of the activity, students will have a short transcription activity where they will have the chance to hear some people talking about seasons and weather changes in different parts of the world. Give them a couple of opportunities for them to get familiar with the information, this will give them the necessary tools for the exercise we will have in the multimedia room.

TECHNOLOGY LESSON PLAN

Transition

Now, students were supposed to bring some items from home that they could use to represent some different weather and seasons around the world, check the items and have a short review about the previous audio.

Activity 2

For the activity, each group will have to take a picture in which they can represent different activities and weather descriptions in certain parts of the world, you can use several countries or different places in Colombia to do the activity more inclusive. Once the pictures are taken, we will create a **Padlet** where students will have the chance to interact, describe and give their opinions about the pictures everybody else posted. Students will work on the same groups they did for the pics.
