

TECHNOLOGY LESSON PLAN

FUNDAMENTAL PLUS 1 – UNIT 1 (WRAP-UP)

OBJECTIVE: Talk about people from around the world.

PRE-TASK: Take Students to the Multimedia Room and Have them discuss the following questions: 1. What aspects do you think make us different from people from other countries? 2. What aspects do you think make us equal from people from other countries?. Teacher uses the option “Random Pairing” from the X-Class to have Students discuss with different partners. After some minutes of discussion have Students share their findings.

WHILE-TASK: As Students share their findings, Teacher writes the information in categories (e.g. Age, Population, Religion, Jobs, Technology, etc.) Then, Students will read the text on page 15 and will compare the information presented on the text and the one they shared in the activity above. Teacher, then explains the activity they will carry out. In pairs (or individual if the group is small) Students will look for information about a specific country (different from Colombia) and will create an infographic using <https://www.canva.com/create/infographics/>. Students will use the text on P.15 as example of what they are to do.

POST-TASK: When Students finish with the infographic have them present their information using the “Student Show” option from X-Class. Get Students to peer evaluate their partners' information in terms of clarity and accuracy.
