

TECHNOLOGY LESSON PLAN

FUNDAMENTAL PLUS 2 – UNIT 5 Lesson 1

OBJECTIVE: Describe food you like

PRE-TASK: Have students share a little about their likes and dislikes related to food. Encourage students to include information about fruits, vegetables, meat, etc. After that, students will review some of the food vocabulary they will use along this Unit. Get students to open the webpage <http://www.languageguide.org> and to focus their attention on the vocabulary about food activities. Give students some minutes and then, have them share some of the new words they learnt.

WHILE-TASK: Once students finish sharing tell them they will show people what their favorite food is. Get students to look for a picture of their favorite dish and using the “Student Show” option from X-Class get students to describe what the ingredients are and why they like it so much.

POST-TASK: Finally, tell students to change places with a partner. Then, students will imagine they are in a Radio cooking show. In this show they will describe people’s favorite dishes, to do so students will use the picture their partner presented in the activity above. Students, then, will use www.online-voice-recorder.com to make a voice note in which they introduce themselves and talk about their partners’ favorite food. In the description they have to include ingredients and quantities (as they already reviewed the use of quantifiers). When they finish, teacher will ask students to rotate listening to their partners voice note. Tell them to take notes on mistakes and socialize them as a class.
